Sector: biotech services > analytical services > custom DNA sequencing

Profile: Fasteris SA is a Geneva, Switzerland based biotech company providing DNA sequencing and custom research services. We deliver results of the highest quality in a short time (24h for sequences) and for a competitive cost while maintaining a personalized contact with our customers.

Services: We are experts in the field of DNA sequencing. We adapt our protocols according to the needs of our customers, e.g. with difficult templates such as telomeres. To demonstrate that we are dedicated to achieve results with our clients' samples we do not charge our analyses when no sequence can be delivered.
Additional services in the field of DNA sequencing include library screening (bacteria colonies picking, PCR amplification and sequencing of the positive clones) or bacteria typing (genomic DNA extraction, PCR amplification and sequencing of the 16S region and optionally strain identification).

Customs services:

- genotyping (e.g. from mouse tails),
- detection of antibiotic resistance genes in bacteria using low density micro-arrays, and
- custom plasmid preparation for up to milligrams of DNA, optionally endotoxin-free.

Custom research projects in molecular biology and microbiology from cloning to bacteria titration.

Interests: We are open to collaborations.
